

Happy Stan's Appliance Recycling Program

Manufacturing

Appliance manufacturers use new and recycled metal to create new products.

Old appliances

End of life appliances are delivered to our Facility

Freon

Freon is sent to a licensed facility for processing so it can be reused in new Freon bearing appliances such as fridges & Freezers.

Removal of Hazardous Material

At our Facility, all hazardous items are removed. Such as fluorescent tubes and Freon.

Appliances are Baled

The appliances are then compressed into large blocks of metal for cost effective transportation.

Mercury

Mercury bearing items such as fluorescent tubes are sent to a licensed facility for the extraction of mercury phosphor.

Steel Mills

The large blocks of metal are then sent to steel mills where they can be recycled into new Steel items.
